

We help companies with workspace transition and expansion – including tracking and managing assets – whether they’re in storage, or in use.

SNAPTRACKER™, FROM KISP INC., IS A COMPREHENSIVE ASSET MANAGEMENT SYSTEM FOR OFFICE FURNITURE ASSETS.

A&M’s SnapTracker asset management software allows companies to effectively track office furniture asset information. It can help you manage these ‘parts-intensive’ inventories, compare proposed floor designs to components in the warehouse and more.

Using SnapTracker will also assist you in identifying system standards and ultimately reduce your Total Cost of Ownership (TCO).

A&M’s SnapTracker is a web-based solution that will let you know what you have available, the colors and fabric choices, what condition each item is in, quantities available, where they are located and much more.

SnapTracker can be used for:

- Warehouse storage of furniture
- Maintenance and repair tracking
- Leasing and tender information
- On-site furniture inventory
- New purchases
- Brokerage
- Cost center charge-backs
- Identifying furniture standards
- Floor design cost comparison
- Trial kitting - building workstations from all the components in inventory

SNAPTRACKER™ REPORTS

Here are some reports you can create with SnapTracker:

Standard Product reports contain the database detail for each record on file, including a digitized illustration or drawing if desired. The information on each unit usually fills about one full page. These are often retained for occasional reference in “master” books, organized by location, asset type, or another useful sequence.

Inventory Listings can be produced as either detail or summary reports, and again sorted in a desired sequence as suggested by the diagram opposite. In addition to printing inventory summaries on a regular schedule for management reporting, such listings can also be produced on an ad hoc basis in response to specific search criteria.

Reconfiguration Analysis reports are most often used when planning a series of office moves or a major relocation. Their purpose is to identify groups of assets that might be deployed so as to reduce the anticipated costs involved.

Inventory Management reports answer the basic “How many do I have, and where are they?” type questions – the stock in trade of day-to-day decision making. When combined with on-line historical data, this information can be used for a wide range of budgeting and strategic planning tasks.

A&M is able to create any custom report that you need with our in house SnapTracker and crystal report expert.
